Media conversion is the most cost-effective solution for extending the productive life of legacy wiring plants and equipment while allowing implementation of new technologies. Media conversion’s greatest benefits are flexibility and cost savings. Designed and manufactured in the USA, the MiniMc extends 10 and 100 Mbps twisted pair network segments up to 80 km over fiber. Both a media and data rate converter, the MiniMc features 10/100 Auto Negotiation on the copper port while the fiber port operates at 100 Mbps full duplex. MiniMc 10/100 switching fiber converters are ideal for all premises, FTTH, LAN-to-LAN or LAN-to-MAN fiber networking applications.

Measuring less than 3.5 inches deep and 2 inches wide, the MiniMc is the industry’s smallest unmanaged media converter with both data connections on the same side of the unit, and at a fraction of the cost of other alternatives. Plug-and-play operation with a variety of model types and powering options make the MiniMc series easy and convenient to use.

The AC power adapter is included with all models listed. Other power options are listed under Accessories.
