XPe Evaluation Kit - PCM-3380

Complete Windows® XP Embedded w/SP2 Implementation Package for PCM-3380

Features

- Windows® Embedded evaluation toolkits (Target Designer)
- Windows XPe operating system images, preloaded on a CF card (512 MB)
- Windows XPe run time license (Evaluation)
- 512 MB industrial CF card
- 512 MB DDR333 SODIMM
- Startup manual

Description

1. Easy Hardware Installation

- Open the evaluation kit.
- Assemble the development board. Take PCM-3380, then add memory (DRAM) and non volatile storage (CompactFlash card). See the user manual for more details of each product.
- Connect the kit to a keyboard, mouse, monitor and power supply.
- Power on the evaluation kit.

2. Easy Software Installation

- Open the Microsoft Windows XP Embedded Target Designer Evaluation DVD.
- To use the evaluation kit, go to the website to request your product key: http://www.microsoft.com/windows/embedded/evalreg
- Check your development platform needs at the evaluation kit site.

3. Customize Your OS Image (Optional)

- Use Target Designer to make a customized XPe image. See the toolkit user manual for more details.
- Request the SLD from Advantech by e-mail: ess@advantech.com, and state the ID number supplied in the box.

4. Install Your Application

- Power on the system with the standard or customized image, then copy your application to a CF card.
- Create a shortcut for your application in XPe.

5. Mass Production

- If your application runs well on the evaluation kit, you can ask our local sales representatives to assemble the whole system with a release version including a Windows Embedded OS license.

6. More Resources (http://www.advantech.com.tw/solutions/ess/)

- If you need help to optimize the operating system image, Advantech offers a professional support service. (ess@advantech.com)
- We have an SDK and API to help develop your embedded applications.
- The API provides a GPIO, SMBus and Watchdog interface.
