Abstract	How to Use Block Detail.		
Keyword	Block Detail		
Related Product	N/A		

■ **Problem Description:**

Block Detail can work as a source template for multiple uses.

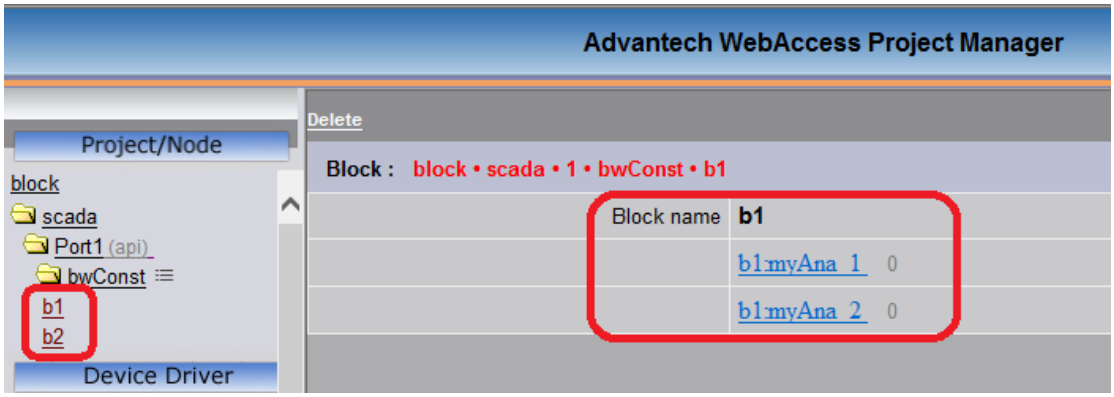

■ **Brief Solution - Step by Step:**

1. Create a block that named “BwconstB”. (here use BwConst” as an example)

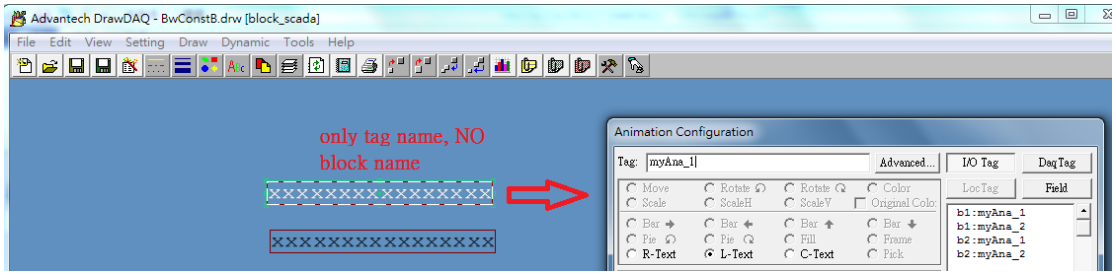

Picture1: Create a Block

2. Create tags by using BwConst Block

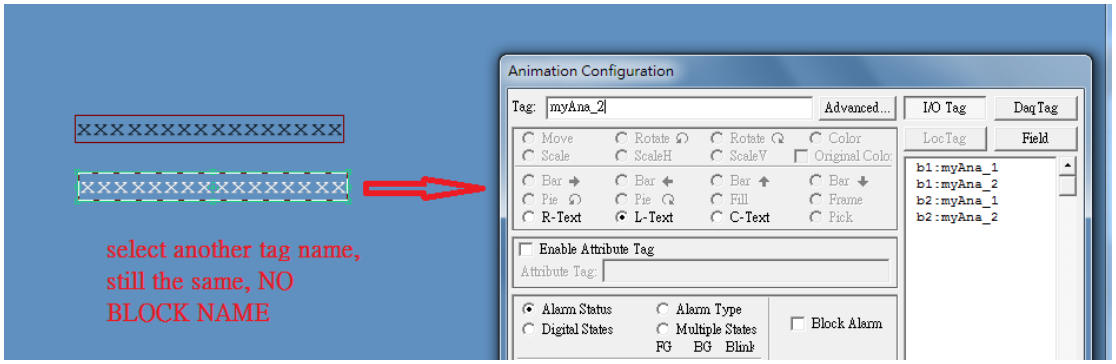

Picture2: Create Tags by Using Block

3. Assign tag name in DrawDAQ, keep in mind that do not BLOCK NAME in Animation Configuration

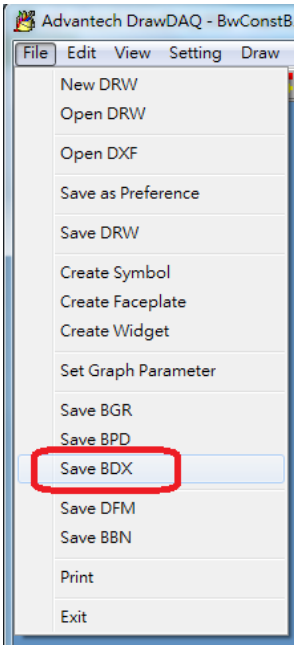

Picture3: Setup Animation Configuration

4. Assign another tag name in DrawDAQ

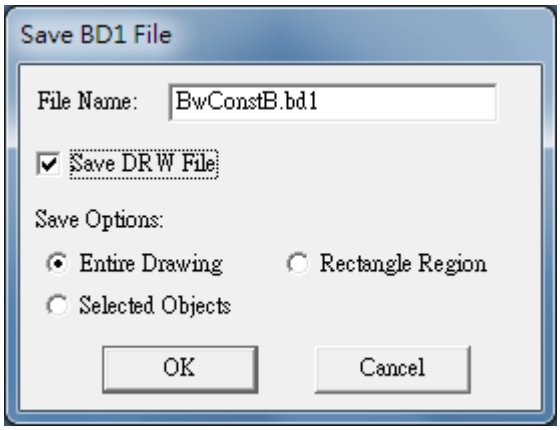

Picture4: Animation Configuration for Next Object

5. Save Block Detail: File -> Save BDX

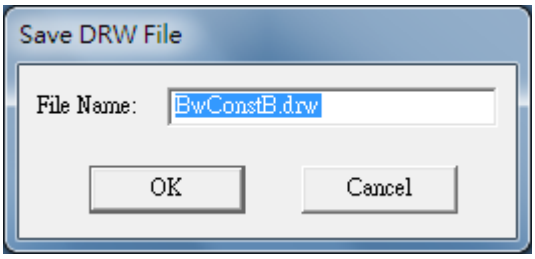

Picture5: Save to BDX

6. File name must be matched with BLOCK name, “BwConstB”: Extension file name is “bd1”

Picture6: Save both BD1 and DRW

7. Save DRW: Note: save extension file name as DXX

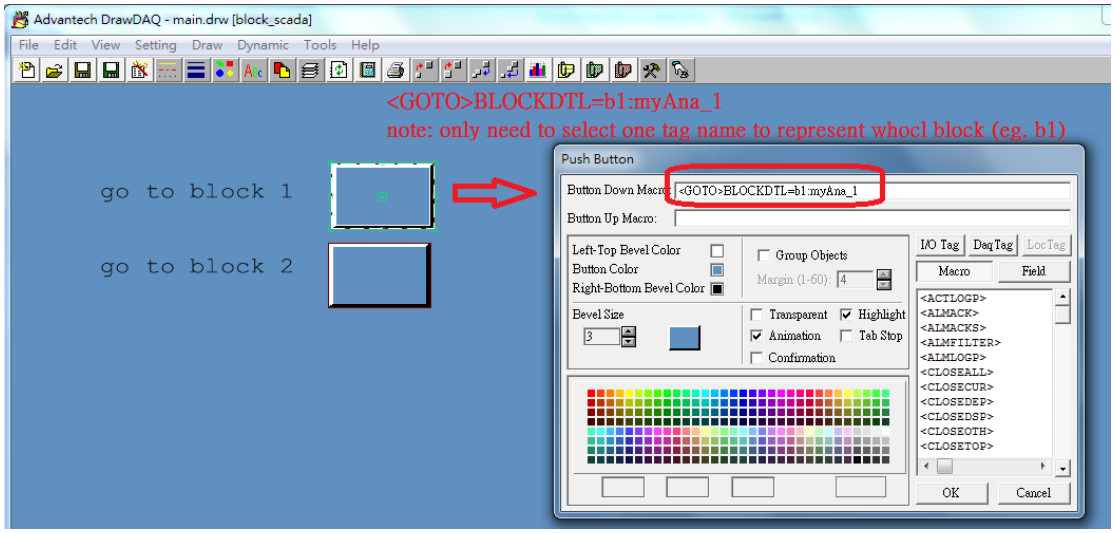

Picture7: Save DRW

8. Create a Main.bgr

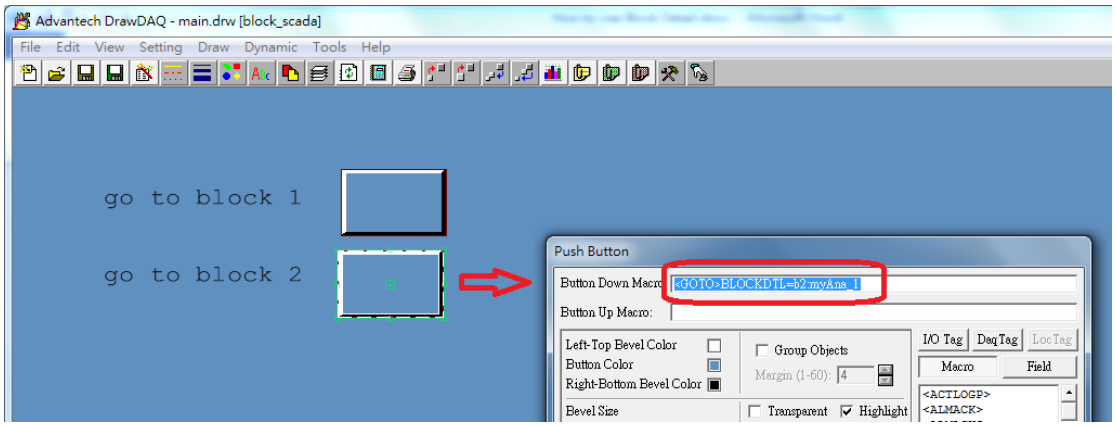

Create two buttons so they may go to first or second block

First push button

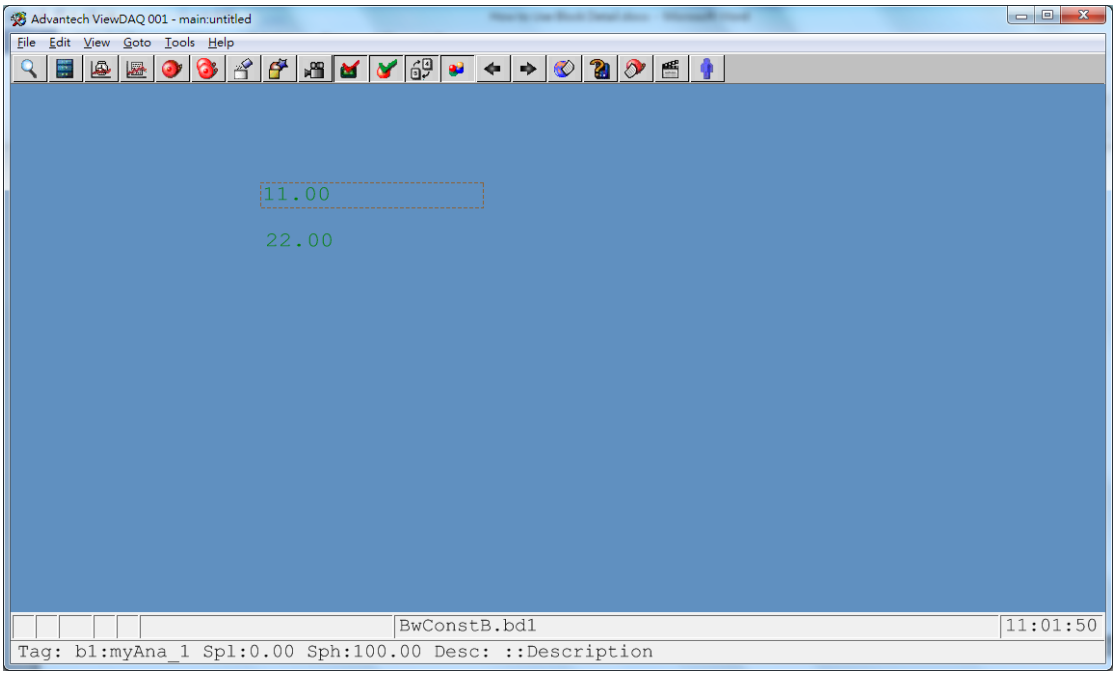

Picture8: Main.bgr

Second push button

Picture9: Second Push Button Configuration

9. Save bgr and drw, then download DrawDAQ
