Text Object Rotates 45 Degrees Angle in Counterclockwise

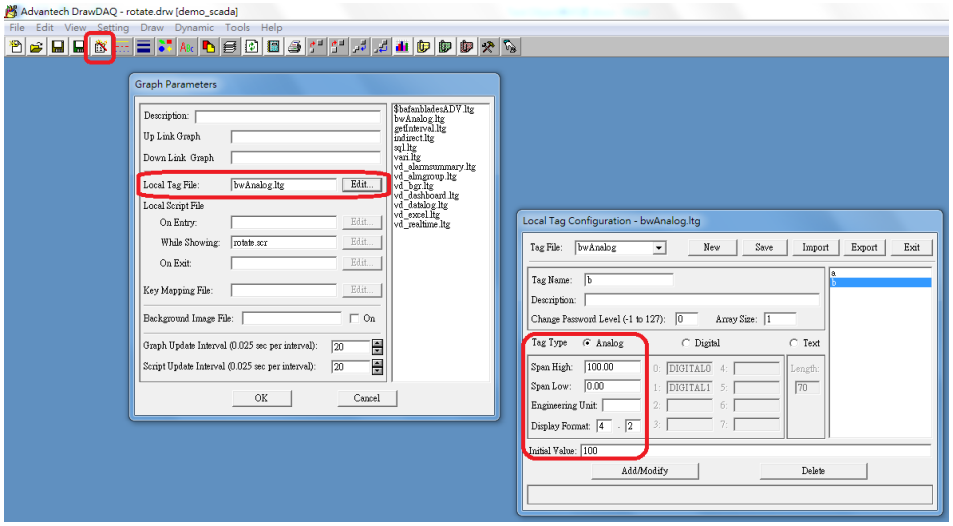

Description:

To display a text object with rotate 45 degree counterclockwise.

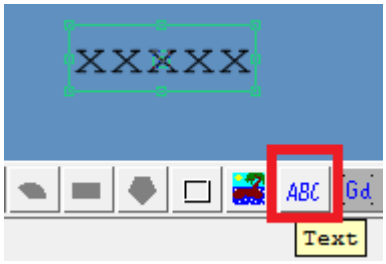

Steps:

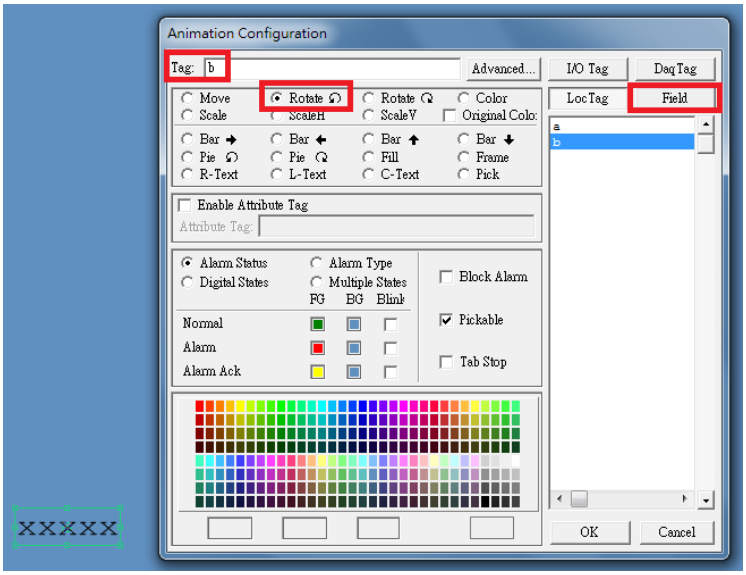

1. Create a Local Tag File (e.g. bwAnalog.ltg) and add an analog local tag “b”
   - DrawDAQ -> Click “Set Graph Parameter” button -> click “Edit” button in “Local Tag File” -> add an analog tag “b”
   - Span High: 100
   - Span Low: 0
   - Initial Value: 100 (initial value must be as the same as Span High value)

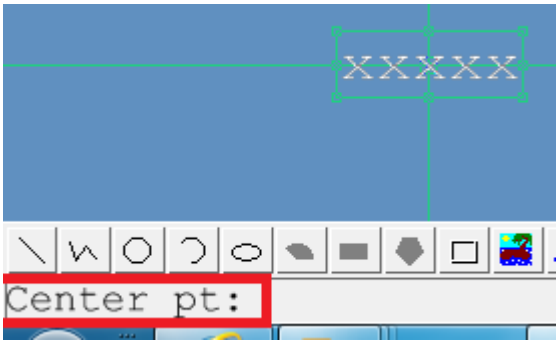

2. Use “Text” button to create a text object

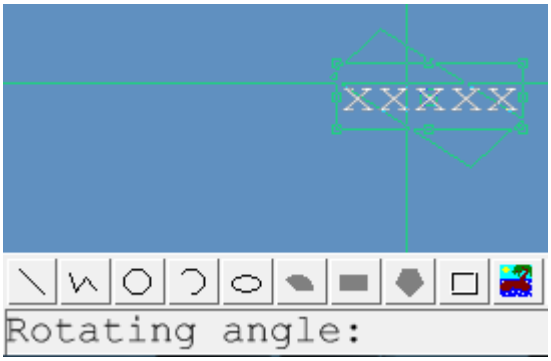

3. Dynamic -> Animation
   - Tag: select local tag “b” from “Field”
   - Select “Rotate ↺”, then click “OK” button
     Note: no matter user selects “Rotate ↻ / clockwise” or “Rotate ↺ / counterclockwise”, the anger always starts with counterclockwise.

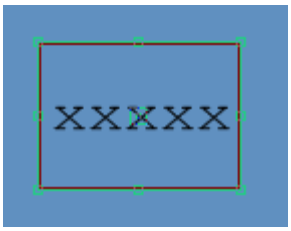

4. DrawDAQ will ask user to enter “Center point”
   User may use mouse click to click in the middle of text object
   Or use keyboard to enter x and y coordinates.

5. Next, DrawDAQ will ask user to enter “Rotating angle”
   Simply enter “45” and click “Enter”

6. Text object will be highlighted with rotate animation.

7. Save bgr page and download DrawDAQ.
   Text will be rotate 45 degree counterclockwise.
