Chapter 1

Overview

1.1 Introduction

The ECU-150 is a high-performance IoT gateway based on the i.MX8M platform. It features an open design with a Quad Core processor, two isolated RS-232/485 serial ports, two 10/100/1000 Ethernet ports, one USB 3.0 port, and an operating temperature range of -40 to 70°C. It offers Mini-PCle and various expansion options for integrating Wi-Fi, LTE, 4G, 5G, and iDoor modules. Running on a Linux operating system with EdgeLink, the ECU-150 allows system integrators to develop applications specifically for solar power, electricity, and factory settings, which require extensive data collection, cloud-based applications, and video monitoring solutions.

1.3 Safety Precautions

The following messages inform how to make each connection. In most cases, you will simply need to connect a standard cable

Warning! *Always disconnect the power cord from your chassis whenever you are working on it. Do not connect while the power is on. A sudden rush of power can damage sensitive electronic components. Only experienced electronics personnel should open the chassis.*

Caution! *Always ground yourself to remove any static electric charge before touching ECU-150 Series. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag.*

Note! *If DC voltage is supplied by an external circuit, please put a protection device in the power supply input port.*
