Introduction

The AMAX-3110 is a 6 axes pulse train standalone motion controller with compact design to save panel space. It is based on ARM processor that makes it ideal for real time motion and I/O control and has built-in softmotion kernel which provides 2-6 linear interpolation, 3D circular interpolation and various application focus motion functions such as position compare trigger and latch in. The AMAX-3110 solutions also provides ARES Developer software which supports ARES BASCI programming to shorten the development time.
