Introduction

Advantech's PCIE-1131 is an Advantech small PCIE that is smaller than low-profile, form factors. The quad-port Gigabit Ethernet PCI Express server adapter is based on Intel® I350 and supports a PCI-Express gen.2 x4 host interface. This adapter provides sufficient bandwidth for line-rate traffic on all Gigabit Ethernet ports. Four SFP ports can be configured to support a variety of optical transceivers such as single-mode SX, multi-mode LX, as well as 1GbE Base-T copper modules. Improved support for virtualization, including but not limited to VMDq and SR-IOV, makes the PCIE-1131 a perfect fit for virtualized environments and applications with network overlays. PCIE-1131 can be used to achieve high densities of network interfaces on servers and platforms for networking as well as industrial applications.
