Introduction

Advantech SKY-9232D3 is a 2U 4Node rackmount server, designed for hyper-converged infrastructure (HCI) and storage applications. Its design creates the flexibility to set up different workloads independently but with shared infrastructure, such as cooling and power supply for a lower the total cost of ownership (TCO).

The SKY-9232D3 is designed with single/dual 3rd Gen Intel® Xeon® scalable processors (formerly Ice Lake) and the latest DDR4 memory technology. It leverages a modularized design concept with one OCP mezzanine slot and up to two PCIe slots per node, providing rich I/O options to maximize the system flexibility. In an addition, the optional on node 2.5" NVMe/SATA SSD can be used for cache/tiring/meta-data functions to improve the storage system performance. Optional redundant and hot-swappable fans also enhance product stability and serviceability comparing to single fan designs.
